

About NorCal Solar

Who We Are:

The Northern California Solar Energy Association (NorCal Solar) is a non-profit educational organization whose mission is to accelerate the use of solar energy technology through the exchange of information. Since 1975 this membership-based group has educated tens of thousands of Californians about solar energy solutions through our events, publications, information center, website, and advocacy programs.

As a crucial part of the global warming solution, we envision an educated and empowered population that uses all forms of solar energy technology and practices for an economically viable, secure, and environmentally sustainable world.

What We Do:

Keep Members Informed

We publish Enews, an acclaimed monthly electronic bulletin of news, events, technology updates, and policy developments.

Maintain a Resource-Full Website

Our website, www.noricalsolar.org, lists events, solar news, extensive educational resources, and a full listing of our Business Members.

Publish the Solar Energy Resource Guide (SERG)

Our annually-updated SERG includes the basics of solar electric and hot water, solar access laws, lighting, passive design, financial analyses, and a comprehensive listing of renewable energy resources.

Engage and inform the Public

We maintain a Solar Information Center to provide an independent source of information on all-things-solar. See the Contact page for ways to contact the Center.

Create networking opportunities

We make connections between people and organizations working for solar solutions. Mark your calendars for our October 18th 2007 Annual Solar Celebration which hosts the City Solar Awards ceremony.
